## Presentation

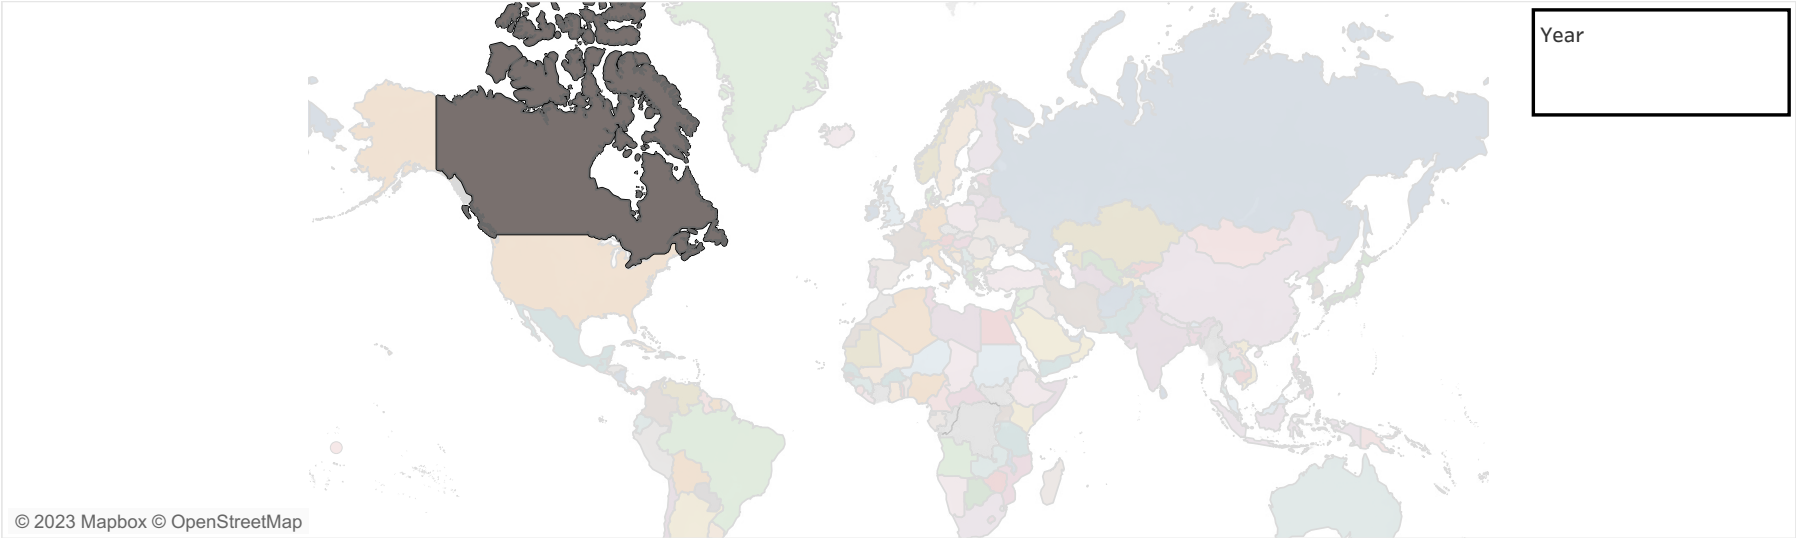

Project Introduction	Project Questions	Start Point - Death Values Only	Death Values per Capita	Total Death Values absent Population Values	Total Death Values adjusted per Capita	% change year over year shows spikes indicative of major events	B ir t. .
----------------------	-------------------	---------------------------------	-------------------------	---------------------------------------------	----------------------------------------	-----------------------------------------------------------------	--------------------

### Project Goals and Questions

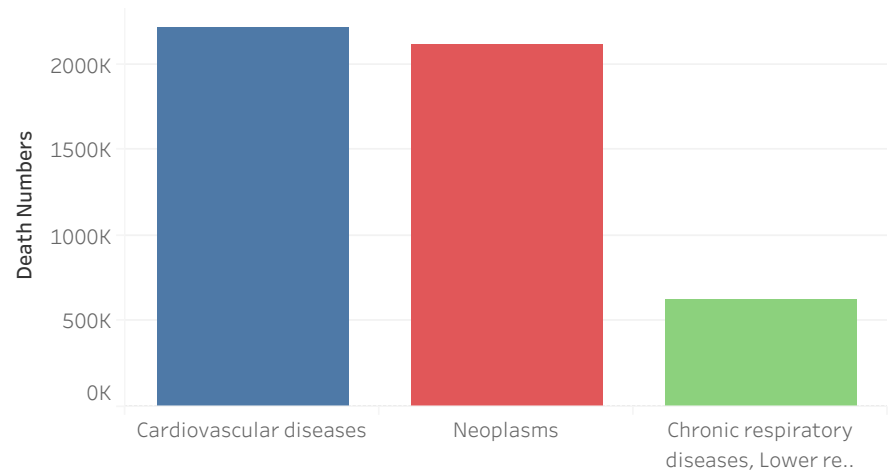

1. What are the top causes of death globally?
2. Is the global top cause of death the same for each country?
3. What are the rates of change for different causes of death in different countries?
4. How do birth rates compare?

# Presentation

Project Introduction	Project Questions	Start Point - Death Values Only	Death Values per Capita	Total Death Values absent Population Values	Total Death Values adjusted per Capita	% change year over year shows spikes indicative of major events	B ir t. .
----------------------	-------------------	---------------------------------	-------------------------	---------------------------------------------	----------------------------------------	-----------------------------------------------------------------	--------------------

Top 3 Causes of Death

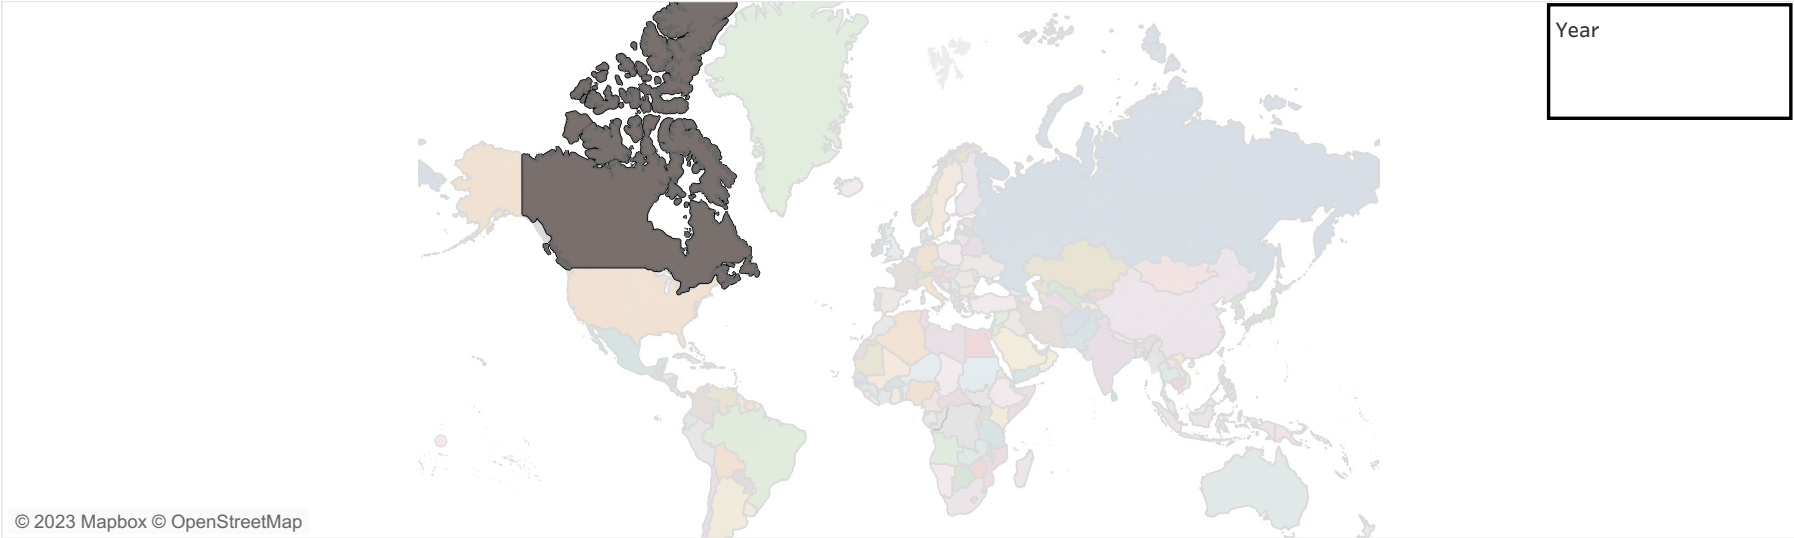

Deaths Per Year

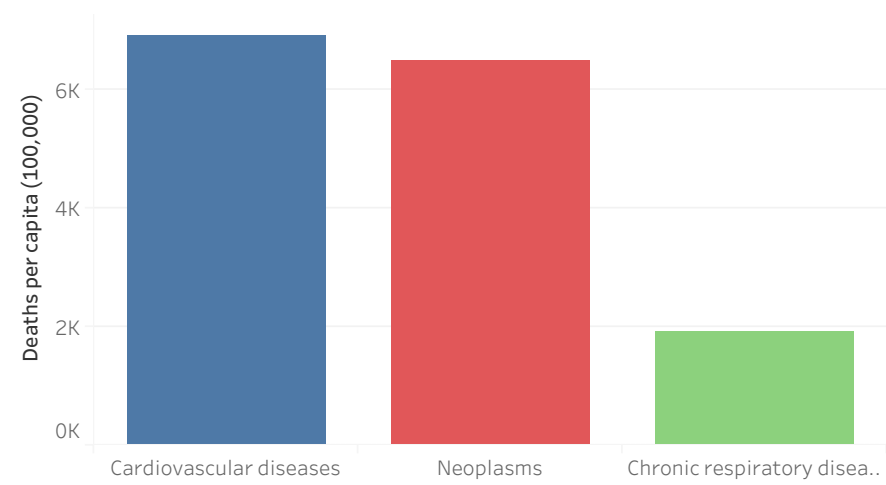

# Presentation

Top 3 Causes of Death - per Capita

Deaths Per Year - per Capita

# Presentation

Project Questions	Start Point - Death Values Only	Death Values per Capita	Total Death Values absent Population Values	Total Death Values adjusted per Capita	% change year over year shows spikes indicative of major events	Birth Rates	.
-------------------	---------------------------------	-------------------------	------------------------------------------------	-------------------------------------------	--------------------------------------------------------------------------	-------------	---

The most populated countries also have the highest amounts of deaths. We need to adjust for population to derive comparisons for all countries.

# Presentation

P r o j ..	Start Point - Death Values Only	Death Values per Capita	Total Death Values absent Population Values	Total Death Values adjusted per Capita	% change year over year shows spikes indicative of major events	Birth Rates	Key Findings
------------------------	---------------------------------	-------------------------	---------------------------------------------	----------------------------------------	-----------------------------------------------------------------	-------------	--------------

After adjusting per capita, Russian citizens are twice as likely to die from disease, accidents, or environmental factors compared to China

### Key Findings

1. Health organizations and individuals should focus on the prevention of cardiovascular diseases.
2. Causes of death drastically vary between continents.
3. Countries with higher birth rates correlate with higher death rates around reproductive and maternal health.
